

Reading Strategy (by Andrew Ng) :

- Do multiple passes of the paper. (No need to finish from start to end in one iteration).
- First Iteration :-
Title / abstract / figures → take the max out of there.
- Second Iteration :-
Intro / Conclusion + figures + skim rest of the sections
- Third Iteration :-
Read the rest of the paper skipping the "Related Work"
- Fourth Iteration :-
Read whole skipping seemingly "unimportant" sections / content.
- Questions to ask while reading ⇒ ?
 - ⇒ What did the authors try to accomplish?
 - ⇒ What key elements of the approach?
 - ⇒ What can you use yourself?
 - ⇒ What references can you follow?
